KEYMACRO is a simple yet fully featured Windows application for generating MAC (Mandatory Access Control) passwords. It generates random MAC passwords which are created using 8-bit string keys and are stored into a list. Mac passwords are used to restrict access to specific files and folders. They are, therefore, extremely important in protecting confidential files and folders. Mac passwords ensure that only the authorized user can access a specific file or folder. The passwords will not be stored, as is the case with most other password managers, but instead they will be used by the computer for security purposes. The features of the program include: - Generate a random MAC password for each file and folder.- Unlimited number of passwords.- Password length from 1 to 100.- Password complexity (at least one uppercase letter, one lowercase letter, one number and one special character).- Password creation using a dedicated key. KEYMACRO reviews: Check KeyMacro 1.0 Downloads, Extension, Screenshot Documents & Downloads YAHOO! Password Reset - Internet & Networking... This software is a complete replacement for YAHOO! Password Reset. It is FREE and you will not need to install or remove any YAHOO! software, only download this new application. It enables you to securely reset your YAHOO! account password in a few simple steps. YAHOO! Password Reset is a free software that can be used as a replacement for YAHOO! Password Reset. It is designed to be a complete replacement for YAHOO! Password Reset and it does not require you to uninstall YAHOO! Password Reset or reinstall the software. It is a free, powerful application. * uTorrent SpeedUp Pro is a very simple download accelerator tool designed to boost speeds inside uTorrent. * Taking advantage of a high-speed Internet connection when using the BitTorrent file sharing protocol is a must, so users who wish to optimize their networks for best results can always do it with uTorrent SpeedUp Pro. * The application boasts a minimal interface, so minimal that there's not even a "Minimize to Tray" button to keep it running in the background all the time. * Besides showing the type of network you're using, connection status and traffic information, uTorrent SpeedUp Pro lets you pick the network interface that uses uTorrent. The program automatically scans and detects all network adapters in your computer, so it's mandatory to pick the one being used by the BitTorrent client. * uTorrent SpeedUp Pro optimizes bandwidth usage and searches for new and faster download sources, thus letting uTorrent reach a higher download speed. * Unfortunately, the package doesn't include a help file, so in case you're curious as how it manages to boost speeds, you can't find too much information within uTorrent SpeedUp Pro. * Still, it's a good thing that everything works pretty smooth, so every Windows workstation out there that's fast enough to run uTorrent should be able to handle this app as well. It doesn't slow down the operating system at all and has a minimum footprint on computer resources. * As a conclusion, uTorrent SpeedUp Pro is worth a try, especially because it can provide users with the high download speed everybody is dreaming

about.Q: IBP Flickr Feed Code to Display Categories I am using the IBP Flickr Feed code to display a list of pictures taken from my Flickr Account on a website. What I want to do is display a list of categories underneath each picture. So that each picture has a category, which is displayed in a different colour. For example : Picture A : has a category = "Sports" Picture B : has a category = "Shopping" Picture C : has a category = "Food" I have a decent background knowledge of PHP & MySQL, but I am not 100% sure how to modify the code to achieve this, I have tried looking through the code and looking at the comments, but I am not 100% sure how to modify the code to achieve this. Can someone please point me in the right direction?
